

The Problem: The Overwhelmed Everyday Investor

Our Solution: **Tickr**

Tickr is a team of AI agents that turn complex financial information into clear, personalised, and actionable insight

Our Agents

Coordinator

- Understand the investor profile
- Orchestrate the analysis

10-K Agent

- Reads company filings
- Extracts financial health & management claims

Risk & Research Agent

- Analyses financial metrics
- Performs valuation & numerical analysis

Market Sense Agent

- Monitors market & macro conditions
- Analyses news and sentiments

Advisor Agent

- Synthesises the reports and provides an investment call based on user's profile

Agentic AI Architecture & Technical Stack

Backend

Python · FastAPI · Pydantic · Uvicorn

Financial Data

SEC EDGAR / edgartools · yfinance

AI

Claude · Amazon Bedrock · boto3

Data / Processing

Pandas · Requests · python-dotenv

Agentic AI Architecture & Technical Stack

LAYER A — DETERMINISTIC EVIDENCE ENGINE | Python

Normalise → Reconcile → Score → Detect Conflicts → Calculate Conviction → Derive Base Call

QUALITY GATE | GUARDRAILS

Evidence-based controls before AI interpretation

- Evidence quality
- Pillar availability
- Conflict detection
- Conviction threshold
- Gates the allowable investment call

LAYER B — AI PORTFOLIO MANAGER | Claude on Amazon Bedrock

Takes the scored evidence + investor profile and:

- Interprets the evidence
- Adapts the analysis to the investor
- Generates the human-readable call + rationale

PERSONALISED INVESTMENT INSIGHT

Accountable Call + Rationale

Our agent is not simply an LLM generating an investment recommendation.

The AI is constrained by Layer A:

- If the quality gate is closed → no BUY
- If a required pillar is missing → no unsupported market claim

10-K Analysis Agent

Turns detailed SEC filings into an investor-ready view of business health and management credibility

Separates financial reality from management narrative, allowing the Agent to test whether the story is supported by the evidence

Why

Equity research should rely more than qualitative interpretation, investment decisions need **objective financial evidence**

How

SEC financial data

→ **Python calculations**

→ Benchmark **scorecard**

→ Market expectation reference

Value

Provides the user with **quality** and **valuation evidence** before any investment call is made

Risk & Research Agent

Metric	Benchmark	Output
Net Profit Margin	$\geq 15\%$	Pass / Hold / Fail
Return on Equity	$\geq 15\%$	Pass / Hold / Fail
Current Ratio	$\geq 1.5x$	Pass / Hold / Fail
Debt-to-Equity	$\leq 1.5x$	Pass / Hold / Fail

Market Sense Agent

What is happening now, and why does it matter to this company specifically?

Company News

→ developments specific to the company

Industry News

→ broader sector developments

Macro News

→ developments affecting the wider economy

Example:

Supportive Tailwinds	Macro & Industry Headwinds
⚡ Legal settlement potentially clears regulatory overhang, enabling accelerated AI product launches (INTERPRETATION: Morgan Stanley's view (noted cautiously as an analyst claim) is that large legal resolutions often precede innovation waves from tech giants. If Meta can redirect management attention and resources toward AI product development, this could support future revenue diversification beyond core advertising.) ⚡ Low market volatility environment (VIX at 14.32) (FACT: VIX is at 14.32 and declining (fred_VIXCLS). INTERPRETATION: Low volatility supports risk asset valuations and reduces the probability of sudden multiple compression driven by market-wide de-risking.) ⚡ Moderating inflation reducing probability of additional monetary tightening (FACT: CPI YoY fell from 3.46% to 3.30% (fred_CPIAUCSL). INTERPRETATION: Easing inflation reduces the likelihood of further rate hikes, which could stabilize the discount rate environment for growth equities and support advertiser cost structures.) ⚡ Broad AI investment momentum across the technology sector (FACT: Nvidia's \$13 billion acquisition of Hugging Face and G20-level advocacy for AI infrastructure signal sustained industry-wide AI investment (news_company_1, news_company_2). INTERPRETATION: This environment validates Meta's own AI investment thesis and may attract developer talent and partnerships to the open-source AI ecosystem Meta participates in.)	⚠ Large settlement cash outflow (~\$17-18 billion) coinciding with heavy AI capital expenditure cycle (FACT: Settlement of approximately \$17-18 billion was reached; timing coincides with Meta's significant AI buildout capex (news_company_3, news_company_4). INTERPRETATION: Simultaneous large cash demands from legal obligations and infrastructure investment could pressure free cash flow, potentially affecting Meta's financial flexibility.) ⚠ Elevated 10-year Treasury yield at 4.77% (FACT: 10-year yield is 4.77% (fred_DGS10). INTERPRETATION: Elevated long-term yields increase the discount rate applied to Meta's future earnings, which can compress the present value of its growth-oriented cash flows and weigh on valuation multiples.) ⚠ Decelerating US real GDP growth (1.5% in Q2 2026) (FACT: GDP growth slowed from 2.1% to 1.5% annualized (fred_A191RL1Q225SBEA). INTERPRETATION: Slower economic growth can reduce advertiser spending, which is the primary transmission mechanism to Meta's revenue. If the deceleration continues, it could weigh on advertising demand across Meta's platforms.) ⚠ Analyst concern about 'strategy diffusion' across too many initiatives (FACT: Needham maintains a 'hold' rating on Meta, citing concerns about strategy diffusion across too many different initiatives (news_company_3). INTERPRETATION (cautious): If Meta's capital and management attention are spread too thinly across AI, metaverse, advertising, and regulatory compliance, execution risk on any individual initiative may increase. This is a single analyst view and should be treated cautiously.)

Advisor Agent

Where our three specialist opinions becomes one accountable investment call

Personalised Investment Decision

The same stock should not mean the same action for every investor

Depending on every investor's:

Experience

Drawdown response

Horizon

Current holding

Position size

Goal

SAME NVDA RESEARCH

Funfamentals + Valuation + Marketing

INVESTOR A

Long-term growth

- 5+ year horizon
- Comfortable buying weakness
- Not currently invested
- Moderate intended allocation

BUY

INVESTOR B

Short-term & concentrated

- <1 year horizon
- Would sell after -25%
- Already owns the stock
- Large intended allocation

HOLD

Tickr checks if owning the stock makes sense for you.

Tickr in Action

WHY IT MATTERS

Cuts research overload

Builds Research Discipline

Makes decisions explainable

Fragmented equity information

Explainable investment decisions

Potential extensions:

Single-stock research → Portfolio-level decision support
